KnowledgeBase Article 2014

Known Software Conflicts

Over many years, Guardian has discovered that some third-party software can cause conflicts with, or even prevent the Guardian ERP System from functioning. These third-party software packages must be fully removed from the workstation and or server to allow full functionality of the Guardian ERP System.

Guardian does not support these products nor does Guardian support any workstation or server on which these products are installed. Replacements and alternatives are the responsibility the end-user.

Currently known software conflicts:

All **Trend Micro** Products

AVG Free Virus Protection

Avast! Virus Protection

Other SQL Database Server and Client packages embedded in software include:
Daceasy
Sage
PeachTree
UPS WorldShip

Glary Utilities

All Registry Cleaning Software

All **LabTech** Monitoring Software

Symantec Endpoint Security *(must be configured to ignore all activity from Guardian)*
