**Trumbull Foundry and Alloy / Jarvie Performance Castings Selects
Guardian Software Systems**

Guardian's global metal casting client list grows with addition

Oconomowoc, Wis. – Guardian Software Systems today announced the addition of [Trumbull Foundry and Alloy / Jarvie Performance Castings](#), a foundry based in Niles, Ohio, to its growing list of global clients.

Founded in 2008, Trumbull Foundry and Alloy / Jarvie Performance Castings is a “new construction” foundry created from the needs of a few customers that had been abandoned by their previous foundry. From its beginning, Trumbull has continuously strived to become the go-to source for those casting jobs that very few other foundries will tackle. Trumbull’s philosophy is to look for ways to make new ideas work. From its humble beginnings in 2008 with eight employees, Trumbull has grown to nearly 50 employees with over 200 combined years of foundry experience.

“We are pleased to announce this partnership, and we look forward to launching into exciting work with the Trumbull team,” said Tim Borchardt, Senior VP of Operations, Guardian Software Systems. “Trumbull’s growth since its founding in 2008 is commendable, and we look forward to supporting them through their entire production chain as they continue that momentum.”

Trumbull CFO and Controller Deana Tremayne selected Guardian in part due to their mutual philosophy of “Specializing in Metal Casting Solutions” and Guardian’s ability to address the needs of the machine shop as well as the foundry. She also noted the company’s well-respected reputation and positive client testimonials played a part in this selection.

As a No-Bake Foundry, Trumbull is capable of casting parts from 1 to 3,000 pounds with a 100-ton monthly capacity. Casting a wide variety of alloys from various Irons to Tool Steels, Carbon Steels and Stainless Steels as well as Nickel and Cobalt base alloys. Trumbull’s Turnkey Machining Services allows them to reduce production time and the flexibility to offer Rapid and Emergency production when required.

About Guardian Software Systems

Guardian Software Systems is a privately held software and services organization and dedicated metal casting provider. With customizable offerings that meet the unique needs of organizations in the metal casting industry throughout the entire production chain, Guardian’s Metal Casting ERP with MES software brings the front office and shop floor together. Backed by 30 years of metal casting industry expertise and first-hand experience in over 250 foundries across the world, the Guardian solution provides organizations with a comprehensive view of their business, arming them with the data and visibility to optimize operations, grow beyond existing KPIs and beat the competition.
